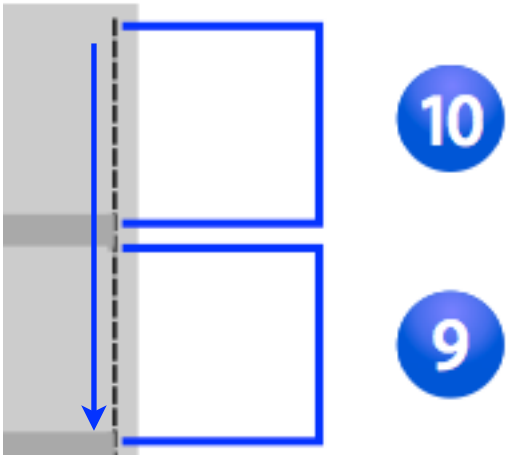
Fixture Basics

Hang Bars

All hang bars contain two prongs. These prongs slide into the holes built into each wall and lock into place when pushed down. Only the top prongs of hang bars are used for counting purposes.

Place your 'framing hangbar' first.
The framing hangbar is set at the 99th hole and ensures a consistent display space in all stores. Count **up** 99 holes and place the top notch of the bar in the 99th hole.

For remaining hangbars, always count **down**.

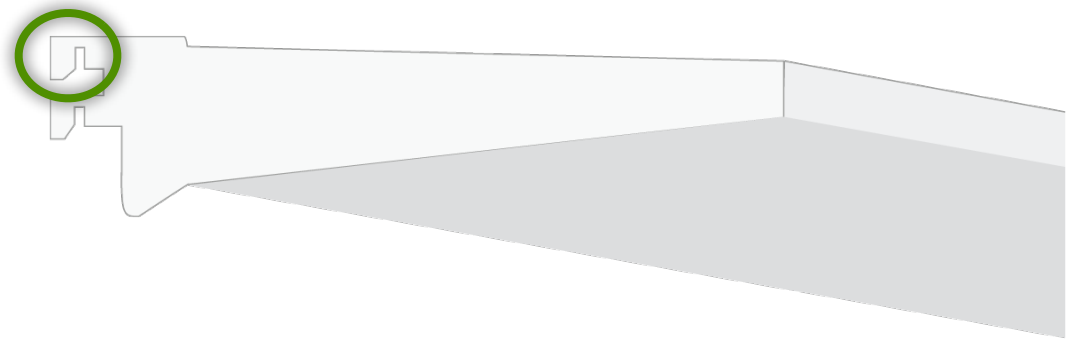


In this example, the top prong of the second hang bar is placed by counting down nine empty holes from the first hang bar. The top prong is then placed into the ninth hole.

Remember, blue represents hang bars and with the exception of the 'framing hangbar', **always work down.**

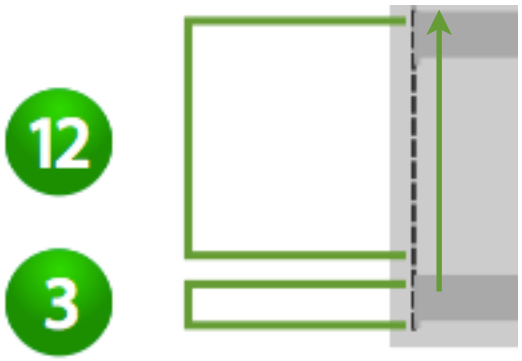
Fixture Basics

Shelves



All shelves contain two or three prongs. These prongs slide into the holes built into each wall and lock into place when pushed down. Only the top prongs of shelves are used for counting purposes.

When placing shelves, always start at the bottom of the fixture and work up.



In this example, the first shelf's top prong is inserted into the third hole from the floor. The next shelf is placed by counting up twelve empty holes from the first shelf. The top prong is then placed into the 12th hole.

Remember, green represents shelves, and always work **up**.
